

## Aftermarket Fuel Pump

Early K bikes came with a 52 mm diameter fuel pump. In 1993, BMW switched to a 43mm fuel pump. As of 2013, replacement fuel pumps new from BMW cost over \$400! However, years ago a K bike owner discovered that a Ford fuel pump was a good, lower cost replacement. This style of fuel pump can now be had on eBay for about \$18 shipped. (Search eBay for "2042 fuel pump) Note that the smaller terminal of the fuel pump wiring is positive

Since this is a rather common approach, Euro Motoelectronics sells foam adapters so that the 2042 fuel pump can be retrofitted into the BMW vibration ring. Here are links for them:

**Tip:** Mount the replacement pump as low as is reasonable to maximize your range per tankfull of gas.
