## Side Stand, all K Models, & R 1100 Models

**Reminder:** As outlined in the "Warranty Information Service History" booklet we recommend "Check and adjust side stand retraction linkage or check function of electric side stand switch (angle)." The first part of the statement applies to K models (2-valve) with retraction linkages and the second part applying to K 4 valve models, & R 1100 models, which have side stand cut off switches.

In some cases all that is needed is cleaning, lubricating, and check that it works correctly. However if these items have not seen regular service, then some replacement parts may be needed as well. Please review the drawings below.

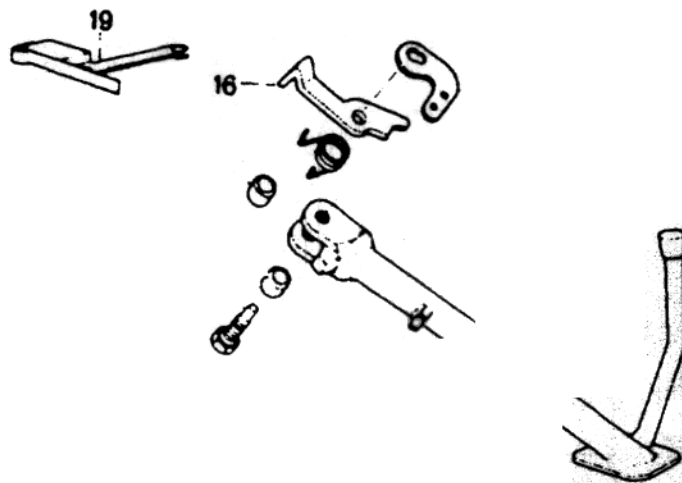

The above drawing is of the K 2 valve model, if after cleaning, lubricating, and adjusting it does not work correctly-check # 4, # 5, and # 6 for stretching and/or distortion. Correct as needed.

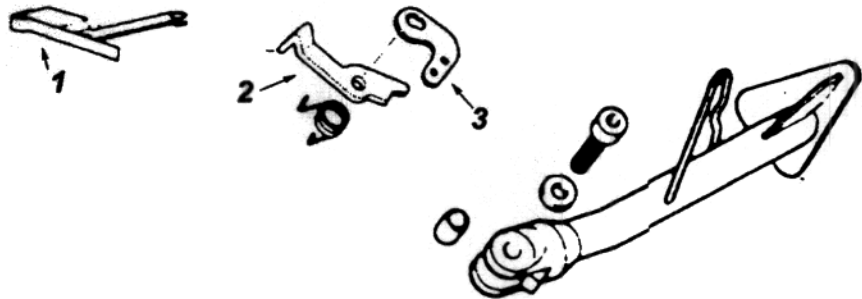

Please initial and route to the following before filing
